Fonds Description

British Columbia Ecological Reserves fonds. – [195-]-1993.

2.61 m of textual records.

ca. 190 aerial photographs: b & w; 25 x 25 cm.

Administrative History

An Ecological Reserve is an area of Crown land (public land) with the most special conservation designation within the British Columbia Protected Areas system. The purposes of the reserves are for scientific research, the establishment of benchmark areas to measure changes in ecosystems, protection of biological diversity, protection of rare and endangered organisms, and the preservation of unique, unusual or outstanding natural phenomena. In the 1960s and '70s, Canada participated in a decade of research known as the International Biological Program (IBP); this involved the description of essential sites on standard international check-sheets. In some cases, check-sheets are the only source of information for many ecological reserves. The British Columbia Ecological Reserves Act passed in 1971; this meant that BC became the first Province in Canada to give permanent protected status to ecological reserves. The Province has the world's most comprehensive ecological reserves program, as of 2015, there are 148 ecological reserves in BC.

University of British Columbia Professor Vladimir Joseph Krajina (1905-1993) advocated for the formation of ecological reserves throughout the 1950s amidst the increase in logging in the Province. Krajina had a remarkable life having emigrated after World War II from Czechoslovakia, where he had been a leader of the Intelligence Service. During the war, he was captured, served time with his wife in a concentration camp and narrowly missed execution. After the war, Krajina joined the UBC Botany Department, where he taught plant ecology for over twenty years and developed a reputation as a distinguished teacher, botanist, ecologist, and conservationist.

Krajina argued for ecological reserves, emphasizing during debates on the reserve concept, "They [the ecological reserves] serve as genetic banks of paramount importance which accomplish a 'museum function.' Distinctive, large, heterogeneous, natural gene pools of different organisms and especially indigenous trees are an irreplaceable resource."¹ In 1968, in BC, as a result of Krajina's work, the Ecological Reserves Committee was formed to advise on the selection of potential reserve sites to preserve in British Columbia.

¹ Reflections on the life, work, and times of Vladimir Joseph Krajina, MOHAN K. WALI State University of New York College of Environmental Science and Forestry, Syracuse, NY 13210, U.S.A. p. 2614.

On May 4, 1974, the first 29 reserves received protective status by Order-in-Council, a conservation landmark. In 1974, a fulltime ecological reserve coordinator was hired, and a volunteer warden program was put into effect in 1980.

Custodial History

The records were donated to UBC Archives by Professor Iain Taylor, from the Department of Botany. Before falling into Professor Taylor's custody, the records had been stored at the UBC Botanical Gardens and the Department of Botany. Professor Krajina's secretary, Mrs. Svoboda, kept meticulous order to manage the ecological reserve applications; this order was restored as much as possible during physical rearrangement. There were many photocopied duplicate copies of the ecological reserve application reports made by Mrs. Svoboda. Where possible only the original versions of the applications are retained.

Scope and Content

The fonds consist of reports from field surveyors submitted as applications to designate areas in British Columbia for protection. The fonds also contains supporting records relating to the wider Ecological Reserve program and include correspondence, progress reports, presentations, memorandums, lectures, briefs, surveys, "dead applications," news clippings, Orders of the Lieutenant in Council, pamphlets, check sheets, aerial photographs, park proposals, handwritten notes, and meeting minutes. Also included is a small series of records relating to Vladimir Krajina, including; general correspondence, curriculum vitae, a list of publications, articles, newspaper clippings, notes, a legacy biography and obituary.

The archivist restored the original order where it was definitive. However, Ecological Reserve Applications 1-39 can be found scattered throughout the supporting records series. The original record keeper appears to have created a filing system beginning at the Ecological Reserve Application 40 (Petitot Rivers).

Notes

Recordings of a series of lectures by Vladimir J. Krajina from September 1975, on the Biogeoclimatic Zones of British Columbia are available [here](#).

No further accruals are expected. A file list is available.

Series Descriptions

Ecological Reserves Applications. – 1973-1983

1.41 m of textual records.

The application reports include the hand written report taken in the field; they also include a typed and signed version of the report and maps. On occasions, the IBP check sheet is present along with correspondence related to the site. Each ecological reserve application file is not always complete, in some, the hand written field reports are missing and in others, the typed reports are unsigned. Application reports for ecological reserves number from report 40 through to report 367. Reports and check sheets on ecological reserves 1-39 are found throughout the records in the supporting records series. The [file list](#) below provides the geographic location of each report. These reports are arranged in chronological order, however, not all reports are present, missing report numbers include 89, 91, 263, 298-300, 314 & 330. Boxes: 1-3

Ecological Reserves Supporting Records. – [195-]-1990

1.04 m of textual records.

ca. 190 aerial photographs : b&w ; 25 x 25 cm.

Series includes records relating to the selection and confirmation of ecological reserves in BC. The records present in this series include correspondence, memorandums, meeting addresses, lectures, briefs, surveys, reports, “dead applications”, news clippings, Orders of the Lieutenant in Council, booklets, pamphlets, programs, check sheets, aerial photographs, park proposals, handwritten notes, and meeting minutes. Some of the reports in this series address the progress of the Ecological Reserve program in BC. Boxes: 4-8

Vladimir Krajina Records. – 1951-1993

16 cm of textual records.

The Vladimir Krajina records series consists of Curriculum Vitae, a list of publications, articles, correspondence, a letter of reference, newspaper clippings, notes, a legacy biography and obituary. The correspondence is principally in relation to Krajina’s responsibilities as a professor at UBC but a letter is present which references prison sentences of associates in 1979. Another letter, is a photocopy from the Canadian prime ministers office addressed to Krajina dated 1977. Boxes: 9-10
